A COMENTAL DEFECT OF BONE AND CARTILAGE DEVELOPMENT CHARACTERIZED BY ABERRANT BONE MINERALIZATION, SEVERE UNDERDEVELOPMENT OF NASAL CARTILAGE, AND BISTAL PHALANGEAL HYPOPLASIA. THIS DISEASE CAN ALSO BE INDUCED BY INHIBITION WITH THE DRUG WARFARIN SIMILARITY: BELONGS TO THE SULFATASE FAMILY.
                                                    "Biochemical characterization of arylsulfatase E and functional analysis of mutations found in patients with X-linked chondrodysplasia punctata."; chondrodysplasia punctata."; Hum. Genet. 62:562-577(1998).
-!- FUNCTION: MAX BE ESSENTIAL FOR THE CORRECT COMPOSITION OF CARTILAGE AND BONDE MATRIX DURING DEVELOPMENT. HAS NO ACTIVITY TOWARD STEROID SULFATES AND SHOWS MAXIMAL ACTIVITY AT NEUTRAL PH. IS ALMOST COMPLETELY INACTIVATED AFTER 10 MINUTES AT 50 DEGREES
                                                                                                                                                                                              -i- TISSUE SPECIFICITY: EXPRESSED IN THE PANCREAS, LIVER, AND KIDNEY.

- I- DISEASE: DEFECTS IN GALNS ARE THE CAUSE OF MUCOPOLYSACCHARIDOSIS
TYPE IVA (MPS-1VA) (ALSO KNOWN AS MOROLIO A SYNDROME) WHICH IS
CHARACTERIEDD BY SPECIFIC SPONDYLOEPIPHYSEAL DYSPLASIA, SHORT
FRUNK DWARFISM, COXA VALGA, ODONYOID HYPOPLASIA, CORNEAL
OPACITIES, PRESERVATION OF INTELLIGENCE, AND EXCESSIVE URINARY
EXCRETON OF KERPANA SULFATE AND CHONDROITIN-6-SULFATE. SEVERELY
AFFECTED PATIENTS USULLY DIE OF CRRIOPOPULMONARY DISTURBANCE OR
CERVICAL CORD COMPRESSION IN THE SECOND OR THIRD DECADE OF LIFE.
- I- SIMILARITY: BELONGS TO THE SULFATASE FAMILY.
                                                                                                                                           SHIMOZAWA N., ORII T.;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ΡŢ	Production of glycosylated iduronate-2-sulphatase enzyme (IDS) -
PT	comprises culturing a host cell containing a nucleic acid encoding
PT	the enzymatically active iduronate-2-sulphatase polypeptide
PS	Example 1; Fig 1; 53pp; English.
ပ္ပ	A method has been developed for the production of glycosylated
ပ္ပ	iduronate-2-sulphatase enzyme (IDS). The method comprises culturing
႘	a host cell containing a nucleic acid encoding the enzymatically
ນ	active IDS polypeptide where the host cell glycosylates the polypeptide
ပ္ပ	to a greater degree than a native IDS polypeptide expressed by a
ပ္ပ	natural human liver cell. The present sequence represents human
ပ္ပ	IDS which is used in an example from the present invention. The
ပ္ပ	recombinant IDS is used to treat IDS deficiency where heparin sulphate
ပ္ပ	and dermatan sulphate accumulates in lysosomes resulting in Hunter
႘	syndrome which is manifested by e.g. severe mental retardation,
ပ္ပ	skeletal deformities and stiff joints. The recombinant IDS possesses
႘	inter alia an improved half life inter alia and improved uptake
ည	properties in comparison to the naturally glycosylated molecule.

Treatment of iduronate 2-sulphatase deficiency - comprises
administering recombinant iduronate 2-sulphatase
T administering recombinant iduronate 2-sulphatase (IDS).
The present sequence is human iduronate 2-sulphatase (IDS).
The present sequence is near iduronate 2-sulphatase (IDS).
The present sequence iduronate 2-sulphatase (IDS).
The present sequence iduronate 2-sulphatase (IDS).
The present sequence 200 iduronate 200 iduronate 2-sulphatase 200 iduronate 2

CDNA of mouse OSF-8 (mOSF-8) was isolated from mouse osteoblastic

CDNA of mouse OSF-8 (mOSF-8) was isolated from mouse osteoblastic

cell line MC3T3-E1 cDNA library by a combination of PCR and the

subtraction method, and by the differential screening method. OSF-8

has homology with known representative sulphatase molecules but

belongs to a new subclass different from those so far reported.

The inventors claim the precursor protein (RR1355 AAs 1-556) which

includes the signal peptide(AAs 1-18), and they also claim a protein

the claimed proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                    DNA encoding human sulphamidase – useful for producing recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bone-related sulphatase-like protein, OSF-8 - degrades sulphate groups of proteoglycan sugar chains, useful for treating bone metabolic diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful for diagnosis and treatment of e.g. cancers, neurological useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders claim 11; Page 339-340; 464pp; English.

This sequence represents a secreted human protein encoded by the gene corporation for the descriptor line. The gene can be used to generate classon proteins by linking to the gene to a human immunoglobulin FC portion (e.g. X27302) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 123 novel genes and their fragments (nucleic acid sequences: X27311-X27449; amino acid sequences Y02650-Y02788) which are useful for preventing, treating or ameliorating medical conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 123 polynucleotides, based on which tissues they are most highly expressed in (see X27311 for described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

Human iduronate-2-sulfatase amino terminal peptide.
Human; iduronate-2-sulfatase; IDS; liver; glycosylated; heparin sulphate;
dermatan sulphate; lysosome; Hunter syndrome; severe mental retardation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the argument cally active iducates. Sulphatase polypeptide the argument cally active iducates. Supply the argument of all solutions and all solutions are argument of a most call containing a nucleic acid encoding the enzymatically active IDS polypeptide where the host cell glycosylates the polypeptide to a greater degree than a native IDS polypeptide expressed by a natural human liver cell. The present sequence represents an IDS amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           peptide fragment. In Saficiency can be treated by administering a recombinant human IDS deficiency can be treated by administering a recombinant human IDS that is more highly glycosylated than the naturally occurring enzyme, useful in the treatment of Hunter syndrome. The recombinant IDS may be administered in 0.5 microg/kg to 20 mg/kg doses. The administration route is oral, intravenous, intraperitoneal, intramuscular, subcutaneous or intranasal. The recombinant IDS has better uptake properties and/or a longer half-life in vivo, and is thus more efficient than naturally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Production of glycosylated iduronate-2-sulphatase enzyme (IDS) -comprises culturing a host cell containing a nucleic acid encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     administering recombinant iduronate 2-sulphatase
Example 1; Column 11; 53pp; English.
The present sequence is a human iduronate 2-sulphatase (IDS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treatment of iduronate 2-sulphatase deficiency - comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 136; DB 1; Length 25;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            X40826 to X41093 represent 5 expressed sequence tags (ESTS) for human secreted proteins, and encode the proteins given in Y01602 and x119260, respectively. The proteins given in Y01602 and peptide and an Niterminal fragment of a secreted protein. The nucleic acid sequences can be used for producting secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell reproductive hormone proliferation/differentiation activity, hematopolesis regulating activity, chemicatic/chemokinetic activity, hormoneactic/chemokinetic activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activity and products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion
                                                                                                                                                                                                                                                                                                                                                Human 5' EST secreted protein SEQ ID NO: 573.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a novel flea cysteine protease. The present sequence represents a novel flea cysteine protease. The protein, as well as the DNA encoding the protein, may all be used in therapeutic compositions to reduce flea protease activity (especially finandoglobulin protease) and so reduce flea infestation, especially in carts or dogs. Alternatively, flea larvae may ingest the faeces of adult fleas which comprises anti-protease antibodies produced by a host animal in response to administration of the protein. Therapeutic compositions may further comprise a compound that reduces haematophagous ectoparasite burden by a method other than by reducing flea immunoglobulin protease activity. The novel flea DNA encoding the protein can also used to produce recombinant protein, and fragments of it are used as probes and primers for identification and isolation of related sequences, also as antisense, triplex-forming agents and ribozymes for inhibition of the synthesis of the protein. Ab are also useful for screening expression libraries, to purify the protein and to target cytotoxins to fleas.
                                                                                                                                                                                                                                                                                                                                                                                                           ö
terminal peptide used in an example from the present invention. The recombinant IDS is used to treat IDS deficiency where heparin sulphate and dermatan sulphate accumulates in lysosomes resulting in Hunter syndrome which is manifested by e.g. severe mental retardation, skeletal deformities and stiff joints. The recombinant IDS possesses inter alla an improved half life inter alla and improved uptake properties in comparison to the naturally glycosylated molecule. Sequence 25 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       119 RNDVDAMKVALLKHGPISVAIDASHKTSSFYSNGVYYQPKCGNKRGQLDHAVLVVG-YGE 177

The present sequence represents a novel flea cysteine protease. The present sequence represents a novel flea cysteine protease. The protease, its mimetopes, antibodies (Ab) and inhibitors of the protease, its mimetopes, antibodies (Ab) and inhibitors of the protease at the DNA encoding the protein, may all be used in the protein, as well as the DNA encoding the protein, may all be used in the protease activity (especially in cats or dogs. Alternatively, flea larvae may ingest the faceces of adult fleas which comprises anti-protease antibodies produced by a host animal in response to administration of the protein. Therapeutic compositions may further comprises a compound that reduces haematophagous ectoparasite burden by a method other than by reducing flea immunoglobulin protease activity. The novel flea DNA encoding the protein can also used to produce recombinant protein, and fragments of it are used as probes and primers for identification and isolation of related sequences, also as antisense, triplar forming agents and ribozymes for inhibition of the systems of the protein. Ab are also useful for screening expression is the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     220 RNDVDAMKVALLKHGPISVAIDASHKTSSFYSNGVYYQPKCGNKRGQLDHAVLVVG-YGE 278

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a novel flea cysteine protease. The protease, its minetopes, antibodies (Ab) and inhibitors of the protein, as well as the DNA encoding the protein, may all be used in therapeutic compositions to reduce flea protease activity (especially immunoglobulin protease) and so reduce flea infestation, especially in cats or dogs. Alternatively, flea larvae may ingest the faeces of adult fleas which comprises anti-protease antibodies produced by a host animal in response to administration of the protein. Therapeutic compositions may further comprise a compound that reduces haematophagous ectoparasite burden by a method other than by reducing flea immunoglobulin protease activity. The novel flea DNA encoding the protein can also used to produce recombinant protein, and fragments of it are used as probes and primers for identification and isolation of related sequences, also as antisense, triplex-forming agents and ribozymes for inhibition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1292 NSLKI-EIPLPFGGKSSRDLKMLETVRTPALHF-KSVGFHLPSREFQVPTFTIPKLYQLQ 1349
                                                                                                                                                                                                                                               synthesis of the protein. Ab are also useful for screening expression libraries, to purify the protein and to target cytotoxins to fleas. Sequence 327 AA:

ApoB is a lipid-binding peptide adapted to bind to phospholipids at one or more amphipatic alpha-helical peptide regions. ApoB gene is pref. expressed in Chinese hamster ovary (CHO) cells and the gene is introduced in an expression vector having a regulatable promoter derived from the human metallothionein II gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Apob-100 is a major apoprotein component of very-low density lipoproteins (VLDL), intermediate density lipoprotein (IDL), low density lipoproteins (VLDL), intermediate density lipoprotein (IDL), low density lipoproteins (LDL) and lipoprotein a. The specification binding and in vivo transport of nucleic acids. Binding domains (see W96827-77) and nuclear localisation sequences (see W96878-97) for use in the composition can be derived from the present sequence. The composition is used to deliver nucleic acids to eukaryotic cells, in vivo or in vitro, for expressing a therapeutic polypeptide or antisense on landing in the composition of specifically they are used for gene therapy of cancers (particularly nor-small cell lung carcinoma), diabetes, cystic fibrosis and arteriosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Amino acid sequence of human apolipoprotein B-100 (apoB-100). Human apolipoprotein B-100; apoB-100; very-low density lipoprotein; VLDL; apolipoprotein; binding; in vivo transport; nucleic acid; binding domain; nuclear localisation sequence; gene therapy; cancer; cystic fibrosis; non-small cell lung carcinome; diabetes; arteriosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5,
3-methyl-7-alkyl-xanthine opds. can be produced by culturing a transformant contg. the CDM gene in a nutrient contg. 1,3-dimethyl-7-alkyl-xanthine.
3-methyl-7-alkyl-xanthine opds. are useful as pharmaceutical intermediates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 107; DB 1; Length 4536;

Mean 27.130; Variance 37.308;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

scale 0.727

GENOMICS 16:755-757(1993).

-!- FUNCTION: REQUIRED FOR THE LYSOSOMAL DEGRADATION OF HEPARAN
SULEATE AND DERMATAN SULFATE.

-!- CATALYTIC ACTIVITY: HYDROLYSIS OF THE 2-SULFATE GROUPS OF THE
L-IDURONATE 2-SULFATE UNITS OF DERMATAN SULFATE, HEPARAN SULFATE
AND HEPARIN. DANIELE A., FAUST C.J., HERMAN G.E., DI NATALE P., BALLABIO A.; EUKARYOTA; METAZOA; CHORDATA; VERTEBRATA; TETRAPODA; MAMMALIA; EUTHERIA; RODENTIA. PIR; A47153; A47153.
